

# NIKHIL GHUGARE

Data Analyst | Data Scientist | Data Engineer

Seattle, WA | +1 (206) 535-9528 | [nikhil.ghugare20702@gmail.com](mailto:nikhil.ghugare20702@gmail.com) | [linkedin.com/in/nikhilg2103](https://www.linkedin.com/in/nikhilg2103) | [github.com/nikhilg-20](https://github.com/nikhilg-20)

## EDUCATION

### Master of Science in Data Science – Seattle University

GPA: 3.5 / 4.0

June 2026

Seattle, WA

**Coursework:** Statistical Machine Learning, Advanced Machine Learning, Big Data Analytics, Data Visualization, Probability

### Bachelor's in Computer Engineering – Savitribai Phule Pune University

GPA: 7.7 / 10.0

May 2024

Pune, India

**Coursework:** Database Management Systems, Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Operating Systems

## EXPERIENCE

### Amazon Worldwide Sustainability (Industry Capstone)

Seattle, WA

Seattle University

Jan 2026 – Jun 2026

- Modeled inventory recovery outcomes across **60M+ operational records** from **14,902 fulfillment sites** using **AWS S3 and EC2**, achieving **97.7% classification accuracy** to inform data-driven recovery decisions.
- Identified key recovery drivers across **2.46M site-product-week observations** through **temporal feature engineering and exploratory analysis**, revealing current-week inventory volume and GL-level recovery history as predictive signals.
- Optimized predictions for high-value recovery scenarios by building a **three-stage XGBoost pipeline** with **hyperparameter optimization**, evaluating performance across recovery-rate buckets, including **30%+ recovery rates**.
- Quantified financial risk across **five recovery pathways** through a **custom cost-of-waste framework**, collaborating with **technical and sustainability stakeholders** to translate model outputs into lifecycle costs and business implications.

### Data Science Intern

Houston, TX

Motherson Group – Chairman's Office, Americas

Jun 2025 – Aug 2025

- Developed automated **Power BI dashboards** using **7+ years of HR data**, enabling executive workforce decisions across **5 countries** and **70+ manufacturing entities**.
- Streamlined HR reporting by consolidating a centralized **Excel HR dataset**, using **Power Query** and **lookup functions** to structure key metrics for **manpower, turnover, absenteeism, compensation, and legal cases**.
- Enhanced leadership visibility into workforce trends through interactive **Power BI reports** and communication of HR insights to **non-technical stakeholders**, facilitating cross-entity performance analysis.
- Strengthened data consistency across **multi-source enterprise datasets** by performing **data cleansing, transformation, and validation** and standardizing KPI definitions through weekly collaboration with HR.

### Data Science Intern

Mumbai, India

Prodigy InfoTech

Jan 2024 – Feb 2024

- Generated actionable insights for predictive modeling by performing **EDA on large structured datasets** using **Python, Pandas, NumPy, and Matplotlib** to identify key trends and patterns.
- Developed and evaluated **Linear Regression and Random Forest** models for business forecasting, managing data workflows with **SQL, MySQL, and Oracle** for data extraction and schema design.

## PROJECTS

### Online Transaction Fraud Detection | Python, Scikit-learn, XGBoost, Pandas, NumPy, MySQL

[Project](#)

- Achieved **0.91 ROC-AUC** on imbalanced financial data by developing **XGBoost and Random Forest** fraud detection models with optimized classification performance.
- Improved data preparation and query efficiency through **feature engineering, exploratory analysis, and MySQL schema design** for structured financial datasets.

### Youth Drug Use Risk Modeling | Python, Scikit-learn, XGBoost, TensorFlow, SMOTE, Pandas

[GitHub](#)

- Prepared **55K+ behavioral health records** for predictive modeling through **feature engineering, encoding, and SMOTE oversampling** to address class imbalance.
- Optimized **Random Forest, XGBoost, and SVM classifiers** using **ROC-AUC, hyperparameter tuning, and cross-validation** to select the strongest risk prediction model.

### Bird Audio Classification Using Deep Learning | Python, TensorFlow, Keras, Librosa, CNN

[GitHub](#)

- Developed a **CNN classification pipeline** by converting bird call recordings into **Mel spectrograms** for binary and multiclass species prediction.
- Achieved **90%+ precision** in noisy audio environments through **data augmentation and dropout regularization**, improving model robustness on real-world recordings.

## SKILLS

- Programming & Analytics:** Python, SQL, R, Advanced Excel
- Statistics & Machine Learning:** Scikit-learn, XGBoost, TensorFlow, PyTorch, Statistical Modeling, Regression, Classification, Clustering, Time-Series Forecasting
- Data Engineering & Databases:** PySpark, Hadoop, Hive, ETL/ELT, Data Pipelines, Data Warehousing, MySQL, PostgreSQL, SQL Server, MongoDB, Data Modeling, AWS (S3, EC2, Lambda)
- Business Intelligence & Visualization:** Power BI, DAX, Power Automate, Matplotlib, Seaborn, Plotly, ggplot2, Data Storytelling, Dashboard Development
